## CLAY PAINT

**UKU** clay paints are 100% natural and are produced with solar energy. The wide variety of tones is obtained from different color clays. UKU clay paints are odorless and do not contain volatile organic compounds or synthetic preservatives. Clay paint does not obstruct the water vapor binding qualities of the base surface.

Clay paints are easy to apply and are suitable for covering the indoor walls and ceilings. The surfaces covered with clay paints have a matte, pastel finish and do not reflect light. Creamy clay paint covers well and adds personality to smooth surfaces by leaving a light structure.

### INSPIRA

You can create your personalized tones by mixing clay paints or adding earth pigments.
