CLAY PLASTER

CLAY PLASTER FOR HISTORICAL AND MODERN INTERIORS

UKU clay plasters are 100% natural. They have been tested in Germany according to the DIN 18947:2013-08 standard and belong to the higher strength class S II.

Clay plaster is suitable for all surfaces, both in historical and modern interiors.

ENERGY EFFICIENT BUILDINGS AND HEALTHY INDOOR CLIMATE

Clay plaster regulates air humidity, blocks electromagnetic pollution, neutralizes unpleasant odors, and is suitable for people with allergies.

UKU clay plasters are reusable, environmentally friendly, and come in many different natural and soft colors. The use of clay plasters in buildings creates a perfect synergy between the house, nature, and people. Clay is fireproof, heat-accumulating, and moisture-binding building material.

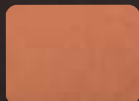

TRADITIONAL CLAY PLASTER FROM SOUTH ESTONIA

Clay plaster creates a peaceful, safe, warm, and comfortable atmosphere. **UKU** finishing plasters can be used in a variety of traditional natural tones.
