PURE EARTH

## CLAY STUCCO MARMORINO

## CLAY MARMORINO AND STUCCO

**UKU** Marmorino and Stucco are 100% natural finishing plasters with the smallest ecological footprint. They are an attractive decorative choice for modern and natural interiors. These fine finishing plasters made in South Estonia have been inspired by the ancient techniques and materials of Japanese masters, and allow for countless unique patterns and finishing styles, from shiny crystal-like to silky-matte surfaces.

Thanks to their surface strength, they are suitable for heavy durability surfaces.

**UKU** Marmorino and Stucco imitate the base surface, allowing them to finish round surfaces and cover niches and ledges.

## CLAY STUCCO

**UKU** clay stucco is like a piece of art with only a few shiny plaster layers reflecting the patterns and creating a luxurious atmosphere. Earth pigments are used to create various tones, and the surfaces treated with a trowel are hard as stone and soft like silk. Stucco is ideal for interior design, complementing the clay plaster surfaces with a more decorative finish. **UKU** Clay Stucco is easy to apply and to clean because of its smooth surface.

## CLAY MARMORINO

**UKU** Marmorino clay finishing plaster imitates marble and natural satin stone, which creates an aesthetic atmosphere. Clay Marmorino has a selection of more than 30 tones, which are obtained from various natural clays. The finishing plaster known for thousands of years is made from purely natural raw materials and is suitable for indoor spaces. The surfaces created with Marmorino clay are very durable and easy to take care of.
